RMGZ 800 A Force Measuring Roller

- Functional Description
  FMS force measuring roller RMGZ 800A series is used to measure the tension in wire, cable and narrow flat materials. An application specific sheave or pulley is mounted to the covering of the two lifetime lubricated ball bearings. A mounting hole with a key-way is required in the machine frame. The key-way holds the position pin which prevents the sensor from twisting. The location of the position pin depends on the direction of force and the position of the red point.

- Measuring principle
  The force measuring rollers apply the force to the measuring web in a parallel plane as opposed to a typical bending beam. This ensures maximum accuracy and measuring sensitivity. Four foil-type strain gauges configured in a full Wheatstone Bridge are utilized to measure the material tension. A mechanical hard stop ensures the highest overload protection and makes the sensor virtually indestructible. This combination guarantees the highest accuracy and reliability without the need for recalibration.

Medium to high tension forces (100 – 8000 N) [22 – 1799 lbf]
Wide material processing range

10 times overload protection
Recalibration is not required

Accuracy class 0.5 %
Wide measuring capability at high resolution

Lifetime lubricated ball bearings
No maintenance necessary

**Options:**

- **H14** = Right angle connector
- **H16** = Temperature range up to 120°C [248°F]
- **H18** = Straight waterproof connector
- **H29** = For use in aggressive media

**Order code (example):**

RMGZ822.A.H14

**Scope of delivery:**

Connector
(Sheaves are available options and not typically included)
